# 1. Introduction

## 1.1 Purpose

The purpose of this document is to specify the functional and non-functional requirements for the AUTOSAR-compliant implementation of the ADC code. This document outlines the software behavior and interfaces in accordance with AUTOSAR standards.

## 1.2 Scope

This SRS document covers the ADC code, including the initialization of the ADC module and the reading of ADC values. The code must adhere to AUTOSAR specifications.

# 2. Functional Requirements

## 2.1 Initialization of ADC Module (ADC1\_init\_mine Function)

### FR 2.1.1

The `ADC1\_init\_mine` function shall initialize the ADC module for operation with a prescaler of 128.

### FR 2.1.2

The ADC configuration shall include setting the reference and adjusting it as required.

### FR 2.1.3

The function shall return `ADC\_OK` on successful initialization.

<b>Service name:</b>	ADC Initialization
<b>Syntax:</b>	Std_ReturnType ADC1_init_mine(void);
<b>Sync/Async:</b>	Synchronous
<b>Re-entrancy:</b>	Re-entrant
<b>Parameters (in):</b>	A pointer to a `ADCCConfig` structure
<b>Parameters (out):</b>	none
<b>Parameters (inout):</b>	none
<b>Return type:</b>	`ADCStatus` (either `ADC_OK` or `ADC_ERROR`)
<b>Description:</b>	Initializes the ADC with adjusting its prescaler.

## 2.2 Reading ADC Value (ADC\_Read\_mine Function)

### FR 2.2.1

The `ADC\_Read\_mine` function shall read the ADC value from the specified channel.

### FR 2.2.2

The function shall set the ADC channel and start the conversion.

### FR 2.2.3

The function shall wait for the conversion to complete before reading the ADC value.

### FR 2.2.4

The ADC value shall be stored in the `ret\_val` as a 16-bit value.

### FR 2.2.5

The function shall return `ADC\_OK` on successful ADC value reading.

<b>Service name:</b>	ADC Get_read
<b>Syntax:</b>	Std_ReturnType ADC_Read_mine(const ADCCConfig* config);
<b>Sync/Async:</b>	Synchronous
<b>Re-entrancy:</b>	Re-entrant
<b>Parameters (in):</b>	A pointer to a `ADCCConfig` structure
<b>Parameters (out):</b>	none
<b>Parameters (inout):</b>	none
<b>Return type:</b>	`ADCStatus` (either `ADC_OK` or `ADC_ERROR`)
<b>Description:</b>	Retrieves the read measured by the sensors

## 3. Non-Functional Requirements (Qualities)

### - NFR 3.1

The code shall meet safety standards suitable for its application.

The code shall perform efficiently and meet specified performance criteria.

## 4. Interfaces

### 4.1 Input Interfaces

The ``ADC1_init_mine`` function shall accept no input parameters.

The ``ADC_Read_mine`` function shall accept an ``ADCCfg`` structure as input, which includes the ADC channel and a pointer to store the ADC value.

### 4.2 Output Interfaces

The ``ADC1_init_mine`` function shall return a ``Std_ReturnType`` indicating the initialization status.

The ``ADC_Read_mine`` function shall return a ``Std_ReturnType`` indicating the reading status.

## 5. Constraints

### 5.1 Safety Requirements

The code is initially intended for non-safety-relevant systems. Safety requirements are assigned medium priority.

### 5.2 Performance Requirements

Performance requirements shall align with project-specific criteria.

## 8. Conclusion

This AUTOSAR SRS document outlines the requirements for the AUTOSAR-compliant implementation of the ADC code.
